| Overall Height            | 0.035"  |
| Additional Specifications | Serrated on Top and Bottom—For Socket Head Cap Screws |
|                           | 18-8 Stainless Steel                                  |
| RoHS                      | Compliant   |

Also known as conical washers, these washers have a slightly cupped shape that gives them spring-like flexibility to resist loosening due to heat and vibration.

Serrated washers have small grooves for extra grip against surfaces. [Belleville disc springs](#) are also available.

18-8 stainless steel washers offer excellent corrosion resistance and may be mildly magnetic. Minimum Rockwell hardness is B85.

Note: Overall height listed is the minimum uncompressed height.

The information in this 3-D model is provided for reference only.
