

High Ratio Wire Lead Transformers

CR Magnetics **CR8400** Series of Wire Lead Current Transformers are available in a wide range of sizes and materials to meet any AC current sensing needs. Our **General Purpose** designs are made from the highest quality silicon steel cores available, and meet most of the common AC current measurement needs. Our **Revenue Grade** CTs (-N) are made from a nickel alloy core which provides the most linear response over temperature and current level. A line of **Ground Fault** (-G) CTs for measuring low AC currents including electrical shields. The **High Frequency** (-F) products are designed for high frequency applications such as high frequency power supplies and motor drives.

$$V = \frac{I \times R}{T_e} \quad V_L = V_{max} - \left[\frac{I \times DCR}{T_e} \right]$$

For best linearity, choose R such that $V < 0.8 V_L$
