Belleville Spring Lock Washers

Also known as conical washers, these washers have a slightly cupped shape that gives them spring-like flexibility to resist loosening due to heat and vibration.

Steel washers with a **black finish** are mildly rust resistant; those with a **zinc plating** offer good rust resistance. All steel washers are made from C1060-C1075 steel and have a minimum Rockwell hardness of C40.

Note: Overall height listed is the minimum uncompressed height.

Metric Nonserrated (DIN 6796)
